I'm not using any specific monitor, instead using it's HDMI output (only HDMI, no other connections). However, when I connect it to my HDMI port on my computer, it shows the following message: I cannot connect anything. I can open "Additional Drivers" and see that it has an "Unknown" entry. It also offers me two options: "Proprietary drivers for linux kernel 3.5.0 and earlier" and "ATI Proprietary Linux x86" (but I don't have that entry). I'm not sure what's happening here, since my graphic card is an NVIDIA GEFORCE 840M (I think). Anyone know what is going on? A: I found the solution on Linux Mint Forums: `sudo apt-get install fglrx fglrx-amdcccle` This should fix it. The Los Angeles Lakers released a statement on Twitter on Thursday, explaining why Andrew Bogut will not play in a preseason game against the Sacramento Kings. Bogut is playing in the second game of the preseason after breaking his leg during the team's preseason opener against the Phoenix Suns on Oct. 7. He has missed the first two games of the preseason, and the Lakers have been waiting to see how his leg is healing in order to allow him to play in the game against the Kings on Thursday. We got a chance to talk to Bogut during his interview with Lakers' owner Jeanie Buss and general manager Rob Pelinka this week. He told us he has been practicing with the team, and that he expects to play in a game against the Dallas Mavericks on Saturday. While Bogut's injury is frustrating to Lakers fans, it appears to be part of a plan that will benefit the team in the long run. The Lakers are only playing two preseason games for three weeks, so Bogut will get a good chance to get back on the court for the regular season when it starts on Oct. 26., due to inherent complexity of the instrumentation and the high performance demands, are not widely adopted. Thus, in this study, a simple and reliable benchtop method using a 2d92ce491b
