Structural determinants of specificity of the replication initiator protein of Escherichia coli. In this study, we examined in vitro the properties of different types of short DNA duplexes of various structures. The templates were composed of (i) all four bases in a random order with the presence of an A:T base pair, (ii) an A:T pair, and (iii) a G:C pair. The starting and the ending sequences of the templates were complementary. When the templates consisted of only the A:T pair or the G:C
