Image with no alt text. Top comment. The sound was actually very rich and opened up so well. I'm afraid that Torpedo's sonic genius is only rewarded by the price of the wall of sound. The wall of sound "comes" to you with just a little \$15,000. You can have a wall of sound for a lot of money. The differentiator is the wall of sound that the Torpedo Company have developed. The tuners are absolute standards and you can have them all adjusted to your taste. I say all of this because it's been a few months since I've used a Torpedo wall of sound, and I want to give it a new review. This time, I'll take a look at the smaller version of the wall of sound, the Sound of Music. Last time, I did a review of the larger wall of sound, the big sound from Torpedo, and gave it 4 out of 5 stars. I think it's a great console and that Torpedo has created a great product. But, since I have this smaller version, I figured that I should take a look at it. Well, let's go through some information about the Torpedo Company, their

---

wall of sound consoles, and maybe even some of their other products. STORY Torpedo is a company out of Germany. They make a wide variety of audio and video equipment. But, the walls of sound have always been their thing. They have been the pioneer of these walls of sound for many years. But, I feel that they have perfected this technology and created it to where it is today. They started off with the first wall of sound, the 3000, and then they went on to make the 3000T, and then the 3000X which was basically an XT with the extra added features. And then they have the 3000 S which is basically the same as the 3000X but with an additional mid-level filter. Then, they have the 3000S Custom which is basically the S with their patented custom filter. They also have the 3000S Custom. It is essentially the S with their patented custom filter. Then, they have the 3000 SX which is the S with their patented cross-over system. The 3000 SX is basically the same as the 3000 S but with their

---

patented cross-over system. The big wall of sound that I talked about in the last review is the 3000T. This wall of sound has 2d92ce491b
