Windows.rar.Q: Convert python list to JSON object I am using Python's json module to parse JSON files. I have a list called a with objects, including a list of sublists. Is there an easy way to convert this to a dictionary? a = [{ 'name': 'A', 'sublist': [{ 'name': 'B' }, { 'name': 'C' }] }, { 'name': 'D', 'sublist': [{ 'name': 'E' }, { 'name': 'F' }] }] And the output should be this: { 'A': { 'B': { 'name': 'B' }, 'C': { 'name': 'C' } }, 'D': { 'E': { 'name': 'E' }, 'F': { 'name': 'F' } } } I looked at the answer to this question, but this only does a shallow copy and doesn't add keys to the inner lists. A: You can use the items method of the json module to get a dict containing the names as keys and the values being dictionaries with the name as the key. The following line will produce the output you described: output = {} for obj in a: 2d92ce491b
