In February 2018, Autodesk acquired the competing 2D/3D parametric modeling software Meshmixer, formerly developed and marketed by New Zealand-based company Matterport.[1] AutoCAD is a very popular CAD program for architects and mechanical and civil engineers, and is also used for related drafting tasks. It has been called the "de facto standard" for the drafting and design of three-dimensional (3D) plans, such as blueprints, architectural drawings, and structural drawings. AutoCAD is currently the world's leading software program for architects and engineers. History [edit] AutoCAD's origins began in 1977, as a direct result of the introduction of the graphical user interface (GUI) for the Mac and Xerox Alto, two early personal computers. This introduced the ability to draw and manipulate vector graphics on screen. The first release of AutoCAD, under the name Autograph, was in 1982 for the Apple II. The file format used by Autograph was ADEF, later ADW, and later Autograph became ADE. In the early 1980s, British car manufacturer Ford Motor Company (FMC) approached its Canadian subsidiary Avro to create a CAD program to help with its design work. Avro's CAD program was modified and released as Ford CAD in 1982. FMC required a program that supported both 2D drafting and 3D design. In 1982, FMC approached Richard and John Sweet to develop a CAD program in-house. The company hired a Canadian graphic designer named Jim Ward to create an initial version of AutoCAD. Ward approached the Apple II version of Autograph. The first version of AutoCAD used the same file format as Autograph and was only capable of 2D drafting, but the name was changed to AutoCAD, after the main character of Star Wars Episode IV: A New Hope. On December 12, 1982, AutoCAD 1.0 was released to the public. Its first supported file format was ADE. In 1983, the first editions of AutoCAD were given to Ford Motor Company, and Bill Gates's company Microsoft. AutoCAD 2.0 was released on August 25, 1983. AutoCAD was originally a raster-based image format, but the file format was changed to EPS in 1985. AutoCAD 3.0 was released on November 27, 1986. Autodesk says it "introduced simultaneous editing of 2D

Installation AutoCAD requires registration of the relevant software serial numbers. In the event of a default Windows authentication method, the Microsoft Windows credential manager is required. After registering the software serial numbers, installation typically completes within 30 to 45 minutes. AutoCAD is available for both on-premises (as a licensed, physical copy) and for cloud-based (as an on-demand license) hosting. In the former case, AutoCAD needs to be installed on a system with adequate resources, such as at least 4GB of RAM. A local installation is only available in English, while a cloud-based installation allows multiple languages. A localized installation for a specific region can be requested. In a cloud-based deployment, the license for the software may be renewed and/or upgraded by using the online AutoCAD interface on the manufacturer's website. Some online features require an additional per-user license (depending on the number of users). AutoCAD Cloud services are provided by Autodesk without additional licensing, but on a monthly, yearly or per-user basis. A number of versions are available for specific regions, including North America, South America, Europe, Australia/New Zealand and India. AutoCAD Cloud pricing includes maintenance, support, updates and customer service. AutoCAD offers a range of add-ons for cloud-based deployment, for such functions as AI and numeric animation. It also includes options to integrate with other third-party products. For local installations, an AutoCAD trial version can be downloaded from the manufacturer's website or an application store. Trial versions come with a limitation on the size of the drawing files. Users are recommended to upgrade after the trial period. Before installation, the user is prompted to select from several options for installing the software, the location of data, the license type, and many other installation and configuration settings. The options will vary, depending on the operating system (Windows 7, 8, 8.1, 10, Windows Server 2012, 2016), on-premises or cloud-based deployment, and whether a localized license is required. The Windows Installer functionality can be accessed by double-clicking on the.msi file. Graphical user interface The default graphical user interface (GUI) is based on the Windows operating system. The interface is available for both cloud and on-premises installation. The basic AutoCAD interface consists of a ribbon, grouped into tabs representing the a1d647c40b

Rapper Hoodrich Pitbull said he wants to be part of the 2020 World Cup tournament, and he's willing to pay his own way. After the tournament, the Miami rapper said he plans to "help build a new world stadium in Miami, which will also be home to a team that I will bring to the game, which will be sponsored by me and me only." Pitbull's desire to be part of the tournament has been a long time coming. In October of 2018, a few months before the World Cup kicks off, the US was knocked out of the tournament, losing to eventual champion France 1-2. The Miami rapper said he was upset by the result and would rather win than play in the tournament. "I'm not going to the World Cup to learn how to play basketball. I'm there to win it," he said in October. The rapper even has a few plans to win. Pitbull said he plans to find the World Cup trophy in one of the five host cities and bring it back to Miami. "If that doesn't work out, there's another way that I'll get it," he said. "I'll just buy the trophy." In the end, if Pitbull buys the trophy, it would likely be the most expensive one ever bought. At the time of the sale, the King of Spain's Crown was said to be worth \$8.2 million. Since winning the tournament, Pitbull said he's been considering entering the 2020 US men's national team, and he also revealed that he was interested in playing for Spain's national team. "I'm not taking any players because I don't want to have a team with a lot of players," Pitbull told the Spanish-language website Extra ESPN Deportes in January. "My team will be composed of Americans. If my players are good, I could be a starting option for the Spain national team."01. Let y be $-1^x(-1 - (-2)/2)$.
