Musical instrument machines are widely used in particular in the field of printing. They are used to effect processes such as toner transfer, calibration, fusing, fixing, and fixing. Specifically, in the field of printing, inkjet printers are used to record a print image on a paper sheet, the printer including an inkjet head. In the inkjet printing apparatus, the inkjet head is provided with ink channels, which apply ink to fine ink ejection ports provided on a board. The board is mounted on the carriage of the printing apparatus. The carriage is moved in a reciprocating manner along a predetermined traveling path. As a result, the inkjet head is moved in reciprocating manner in the widthwise direction of the paper sheet. The width of the inkjet head is considerably large as compared with the width of the paper sheet. The paper sheet is wound around a paper feed roller, and fed through the paper sheet feed path and the printing area between the pair of the printing rollers. As printing is performed, the printing rollers cause the paper sheet to be conveyed toward the inkjet head. Consequently, as the paper sheet is conveyed toward the printing rollers, the paper sheet is inevitably wrinkled by the stresses applied thereto from the printing rollers. Therefore, in the conventional inkjet printer, a paper feed sensor is provided to detect the leading position of the paper sheet that has been conveyed by the paper sheet feed roller. Subsequently, when the paper 82138339de
