Novel approaches to the treatment of adolescent depression. In this review, we focus on the characteristics of adolescents with depression, and the nature and effectiveness of several psychopharmacologic agents currently used in the treatment of adolescent depression. First, we discuss the peculiar characteristics of adolescence as a stage of life, including issues of transition to adulthood, the impact of the family environment, and the comorbidity of anxiety and depression. Second, we review the efficacy of agents in the treatment of adult depression and suggest that existing data are sufficient to argue that such data are also valid for the treatment of adolescent depression. Based on the experience of adults, the efficacy of antidepressants is somewhat less in adolescent than in adult populations, and there are differences in efficacy between antidepressants that may be more pronounced in the adolescent population. In addition, adolescents appear to be more sensitive to the risk of suicidal ideation and suicide associated with the use of antidepressants. At this time, fluoxetine and selective serotonin reuptake inhibitors (SSRIs) appear to be the most useful agents in the treatment of adolescent depression. Although stimulants have been demonstrated to be effective in the treatment of adolescents, the risks of addiction, seizures, and other side
