In February 2014, Autodesk acquired the UK-based ParaSites, a CADD software provider based in Reading, UK. Overview AutoCAD can import and export a wide range of CAD file formats including 2D drawings, DWG, DWF, DWFx, PDF and PNG. A large fraction of the 2D drawings that use AutoCAD are DWG files. The basic file format can be manipulated at the design stage, such as by importing or exporting to other CAD formats, viewing with a text editor, rendering into the native bitmap representation, editing, copying, and pasting. Additional formats such as 2D DXF, 3D DXF, IFC, and STL can be imported or exported. AutoCAD can import data from a large range of sources. For example, it can import native AutoCAD DWG files from a number of systems, including Autodesk DWGx from an Intuos tablet, and from native Portable Network Graphics (PNG) files. A range of tools allows the user to model, organize, dimension, and annotate an object.

The Object Manager tools provide a means for the user to model the structure of a given object. The Orthographic, Polar, and Drawing Views are available for 3D models. The AutoCAD Ribbon provides the user interface for many of AutoCAD's tools. Modeling Autodesk AutoCAD includes basic modeling tools which make it possible to create 3D objects. Modeling can be done in three ways: The basic method of modeling is to do object creation with the 3D model. It is the best method when you are only modeling a single object. The Select and Modify methods are used for refining an existing object. You can select an edge, vertex, surface, or path, and then modify it. Object Studio is an app on Windows and iOS which allows the user to turn a file into a 3D model. Modeling can be done with geometric modeling tools. Properties Properties can be edited in a range of ways: Change the value of properties. These are often displayed as icons

with descriptive labels. Change a property's value from the Properties palette or the Properties window. From a default or another property. The Properties palette can be used to find and display all properties in a model.
